PROFESSIONAL SUMMARY

Full Stack Software Developer focused on **back-end** and **systems integration**, working mainly with **Node.js/Express**, **PostgreSQL**, **Vue.js** and **React Native (Expo)**. Experienced in building data pipelines and middleware that integrate ERPs and CRMs (**SAP, Winthor and Salesforce**), **microservices** and **RESTful APIs** in Node.js and, more recently, chatbots powered by **generative AI** (OpenAI) integrated with **WhatsApp**, with conversation history in PostgreSQL and deployment with **Docker**. Built a mobile app with **Expo/TypeScript** for a client and runs a self-managed VPS infrastructure with Docker and **Nginx**. Analytical, focused on clean and maintainable code, and keen to understand the business behind technical demands.

PROFESSIONAL EXPERIENCE

Software Developer
S-Cube | December 2025 - October 2026

- Designed and built chatbots for support, sales and triage automation, integrating the **WhatsApp API** with **generative AI** models (OpenAI) to create dynamic conversation flows.
- Implemented context persistence and conversation history in **PostgreSQL**, along with infrastructure management and automated deployment with **Docker** via Dokploy.
- Developed a **React Native** mobile app (Expo Router + TypeScript) for a client's member and event management.

Software Developer
B2List | September 2024 - December 2025

- Built and maintained **microservices** and data pipelines (**ETL**) in Node.js for ingesting and synchronizing large volumes of data.
- Developed APIs supporting the platform's business rules, with attention to performance, quality and code maintainability.

Software Development Intern
CSN Mineração | August 2024 - November 2024

- System performance analysis, including SQL query optimization (tuning) and application health monitoring.

Systems Development Analyst
CLI Consultoria | March 2024 - July 2024

- Optimized **RESTful APIs** for real-time data consumption in critical systems, focusing on low latency and availability.
- Developed **middleware** to orchestrate and transform data between **legacy systems** (SAP) and third-party platforms (Salesforce), working directly on understanding and evolving legacy code.
- Contributed to the evolution of the architecture and the scalability of applications.

Software Development Intern
CLI Consultoria | February 2023 - March 2024

- Built data ingestion routines from diverse sources, including APIs, databases (MongoDB), ERPs (SAP, Winthor) and CRM (Salesforce).
- Maintained and optimized existing data pipelines, including legacy code, improving the performance and reliability of data flows.
- Worked in cloud environments with **AWS EC2** and Linux server administration, following DevOps practices.

PERSONAL PROJECTS

Arena — Magic: The Gathering League and Tournament Manager github.com/rodrigoacs/arena

- League and tournament manager for Magic: The Gathering with **Vue 3**, PrimeVue and Tailwind on the front-end and an **Express 5** + **PostgreSQL** API, featuring JWT authentication, round pairings, rankings with tiebreakers and a public league page. Containerized with Docker and Nginx.

Mercadia github.com/rodrigoacs/mercadia

- Financial terminal and collection/deck manager for Magic: The Gathering. A **Node.js/Express** + **PostgreSQL** back-end streams Scryfall's bulk data and collects LigaMagic prices through web scraping (Cheerio), secured with JWT, Helmet and rate limiting. Vanilla JavaScript front-end, installable as a **PWA**, with Chart.js charts. Containerized with Docker.

Librishelf librishelf.com · github.com/rodrigoacs/librishelf

- Personal library to catalog and track book collections, with **Vue 3**, PrimeVue, vue-i18n (Portuguese and English) and Chart.js on the front-end and **Express 5** + **PostgreSQL** on the back-end, with custom migrations, JWT authentication in httpOnly cookies, cover processing with sharp, transactional emails (Nodemailer) and tests with **Jest** and Supertest. Deployed with Docker Compose and Nginx.

EDUCATION

Bachelor's Degree in Information Systems
IFMG, Ouro Branco - MG, Brazil | September 2021 - Present

Technical Diploma in Mechanics (integrated with high school)
IFMG, Congonhas - MG, Brazil | January 2018 - April 2021

SKILLS & TECHNOLOGIES

Back-end & Architecture: Node.js, Express, RESTful APIs, Microservices, ETL, Systems Integration (SAP, Winthor, Salesforce), Design Patterns.

Front-end & Mobile: JavaScript, TypeScript, HTML5, CSS3, Vue.js, PrimeVue, Tailwind CSS, Bootstrap, Chart.js, PWA, React Native (Expo).

AI & Messaging: OpenAI API, WhatsApp chatbots.

Programming Languages: JavaScript, TypeScript, Java, Python, SQL, Kotlin.

Databases: PostgreSQL, MySQL, Oracle, MongoDB.

Cloud & DevOps: Docker, Nginx, Git, GitHub Actions, CI/CD, AWS EC2, Linux (Debian, Ubuntu, CentOS).

Methodologies: Agile, Jira, Code Review, Automated Testing (Jest, Supertest).
