PROFESSIONAL SUMMARY

Full Stack Developer with 3+ years of experience, focused on **back-end** and **systems integration**. I work with **JavaScript**, **TypeScript**, **Node.js** (**Express**), **Kotlin**, **React Native** (Expo), **Vue.js**, **PostgreSQL** and **MongoDB** on **REST APIs**, **microservices**, ETL pipelines and AI chatbots (OpenAI) on WhatsApp. Experienced with **JWT**, **Docker**, **CI/CD**, **Nginx**, **Linux**, **Git**/GitHub and **AWS** (EC2). I work in development teams using **Scrum**, code review, **testing** and pull requests.

PROFESSIONAL EXPERIENCE

Software Developer

S-Cube | 12/2025 - 10/2026 | Remote

- Built support, sales and triage chatbots in **JavaScript** (**Node.js** + **Express**), integrating the **WhatsApp API** (UAZAPI, via webhooks) with the **OpenAI API**, handling about 300 messages/day.
- Built a **multi-tenant** messaging API in Node.js, Express and **PostgreSQL** that centralizes the services connected to UAZAPI, running on **Docker Compose**.
- Developed a **React Native** mobile app (Expo Router + **TypeScript**) for a client's member and event management and reduced the APK size from ~109 MB to ~17 MB (–84%).

Software Developer

B2List | 09/2024 - 12/2025 | Remote

- Built and maintained 10+ **microservices** and data pipelines (**ETL**) in **JavaScript** (**Node.js**) and **Kotlin**, processing about 600,000 records.
- Developed **APIs** in Node.js for the platform's business rules, focusing on performance and maintainability.
- Worked in a team of 10 to 15 developers using **Scrum** (sprints in Jira/ClickUp), **code review** and version control with **Git**/GitHub/Bitbucket.

Software Development Intern

CSN Mineração | 08/2024 - 11/2024 | Congonhas - MG, Brazil

- Followed the development of web solutions in **C#** (**.NET**), working on both back-end and front-end.
- Took part in requirements analysis, technical documentation and demand management.
- Worked with networking, servers, **databases** and application performance tuning.

Systems Development Analyst

CLI Consultoria | 03/2024 - 07/2024 | Remote

- Reduced the runtime of a data integration from over 10 hours to about 15 minutes by optimizing **SQL** queries.
- Optimized **RESTful APIs** for real-time data consumption in critical systems, focusing on low latency and availability.
- Developed **middleware** to orchestrate and transform data between **SAP** and **Salesforce**, evolving legacy code.
- Contributed to application architecture and scalability in sprints (**Scrum**); promoted from intern to analyst.

Software Development Intern

CLI Consultoria | 02/2023 - 03/2024 | Remote

- Built data ingestion routines from APIs, **MongoDB** databases, ERPs (SAP, Winthor) and CRM (Salesforce).

- Maintained and optimized existing data pipelines, including legacy code, improving performance and reliability.
- Administered **Linux** servers in an **AWS** (EC2) cloud environment, following DevOps practices.

PERSONAL PROJECTS

Arena — Magic: The Gathering League and Tournament Manager github.com/rodrigoacs/arena
Personal project | 10/2025 - Present

- League and tournament manager for Magic: The Gathering with **Vue 3**, PrimeVue and Tailwind on the front-end and an **Express** + **PostgreSQL** API, featuring JWT authentication, round pairings, rankings with tiebreakers and a public league page. Containerized with Docker, running behind Nginx.

Mercadia github.com/rodrigoacs/mercadia
Personal project | 12/2025 - Present

- Financial terminal and collection/deck manager for Magic: The Gathering. An **Express** + **PostgreSQL** back-end syncs Scryfall's bulk data and collects LigaMagic prices through web scraping (Cheerio), secured with JWT, Helmet and rate limiting. Vanilla JavaScript front-end, installable as a **PWA**, with Chart.js charts. Containerized with Docker.

Librishelf librishelf.com · github.com/rodrigoacs/librishelf
Personal project | 06/2024 - Present

- Personal library to catalog and track book collections. A **responsive Vue 3** front-end with PrimeVue, vue-i18n (Portuguese and English) and Chart.js consumes a **REST API** built with **Express 5** + **PostgreSQL**, with custom migrations, cover processing with sharp, transactional emails (Nodemailer) and **integration tests** with **Jest** and Supertest. **CI/CD** pipeline with GitHub Actions (tests, lint and build on every push), deployed with Docker Compose and Nginx.

EDUCATION

Bachelor's Degree in Information Systems
IFMG, Ouro Branco - MG, Brazil | 09/2021 - 07/2027 (expected)

Technical Diploma in Mechanics (integrated with high school)
IFMG, Congonhas - MG, Brazil | 01/2018 - 04/2021

SKILLS & TECHNOLOGIES

Programming Languages: JavaScript, TypeScript, Kotlin, C#, SQL, Java.

Back-end: Node.js, Express, REST (RESTful) APIs, JWT authentication, microservices, webhooks, ETL, systems integration (SAP, Winthor, Salesforce), Design Patterns.

Front-end: Vue.js (Vue 3), HTML5, CSS3, Tailwind CSS, PrimeVue, Chart.js, PWA.

Mobile: React Native (Expo, Expo Router).

Databases: PostgreSQL, MySQL, Oracle, MongoDB.

DevOps & Cloud: Docker, Docker Compose, Dokploy, Nginx, Git, GitHub, GitHub Actions, CI/CD, AWS (EC2), Linux.

Quality: Clean Code, code review, pull requests, automated testing (Jest, Supertest).

Methodologies: Scrum (sprints), Jira, ClickUp.

AI & Messaging: OpenAI API, WhatsApp (UAZAPI), chatbots, webhooks, multi-tenant messaging.

Languages: Portuguese (native); English, intermediate (conversational) with advanced technical reading.
